

BILL LOADING PROCEDURE

In order to avoid jams, it is important to correctly load the hopper. Kolibri recommends not to use more than 200 bills at a time. Follow the 3-step loading technique below to ensure smooth bill feeding.

WARNING: Hazardous moving parts!
Do not place fingers, hair, clothes, etc. near the moving parts.

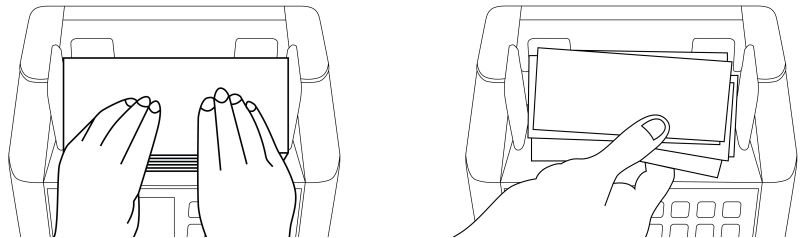

STEP 1:

Correct or remove the bills that are severely wrinkled, damaged or folded. Square the bill stack.

STEP 2:

Adjust the bill guides to a size slightly wider than the width of the bills. Make sure the bill stack is square, as shown in the diagrams below.

STEP 3:

See diagrams below for proper bill feeding. Please note, the unit will start counting automatically (unless in manual mode)
